- Power supply and Signal isolator for 2-wire transmitters.
- Process control with 2 pairs of potential-free relay contacts and analog output for alarm.
- Galvanic isolation of analog signals and measurement of floating signals.
- The UT4623 is designed according to strict safety requirements and is thus suitable for application in process installations.

**Technical characteristics:**

- When UT4623 is used in combination with the HHT4624 display / programming unit, all functional parameters can be modified to suit any requirement. As the UT4623 is designed with electronic hardware switches, which can be set by programming software. No DIP-switches inside the unit.
- On front of the unit a green LED blinking indicates normal operation and malfunction is indicated by slow blinking. During Advanced setting green LED is ON. Red LED is ON for each active output relay.
- A special algorithm for continuous check of important stored data for safety reasons.
- 4-port 2 kVAC galvanic isolation

**UT4624 Programming Unit/HHT**

**Application:**

- Communications interface for modification of functional parameters in 4623.
- Can be moved from one 4623 device to another and download the configuration of the first transmitter to subsequent transmitters.
- Display for visualisation of process data and status, programming aid

**Technical characteristics:**

- LCD display with 2 lines; Line 1 shows input signal and units, line 2 shows analog output or TAG no. and communication or relay status.
- Unauthorised Programming access is avoided by password Protection. The password is saved in the unit in order to ensure a high degree of protection against unauthorised modifications to the configuration.
